

PXI-2527 64-Channel 300V CAT I Multiplexer

The Virtual Bench All-in-One Instrument combines a mixed-signal oscilloscope with protocol analysis, an arbitrary waveform generator, a digital multimeter, a programmable DC power supply, and digital I/O.

The all-in-one features are simple, convenient, and provide more efficient circuit design, debugging, and validation.

The included software lets you view all measurements on a single screen and can be updated with free software releases to add functionality and value.

The Virtual Bench All-in-One Instrument easily integrates with LabVIEW software to provide programmatic control and automated test sequences
